

Study Area: Socio-Economic

The study of socioeconomics looks at how **social behaviors and an area's economics** are interrelated within a society. The social and economic conditions of a place **help inform the critical success factors** of many large projects like the EWA.

Looking at socio-economic conditions on Grand Cayman helps the study team investigate the project's potential impacts on various groups of people, including identifying beneficial outcomes and minimizing detrimental impacts. The socio-economic study looks at topics like access to services and the population and demographic distribution between the Eastern and Western portions of the island.

The socio-economic aspect of the EIA will include all of Grand Cayman, since the EWA could impact people and businesses across the entire island. Specific groups to be evaluated include:

Residents

Businesses

Short-term renters

Marginalised & vulnerable groups

The EIA will assess potential socio-economic benefits and impacts, including:

Quality of Life

Access & Mobility

Income & Economics

Housing

We're evaluating where people live, work, and how the EWA would impact that.

Where people live

Where people work

THE PROCESS
